The system enhances communication between users and support teams, improves response times, and ensures effective issue resolution..
Back End - PHP
Front End - HTML,CSS
Database - Mysql

PROJECTS

Web System for Country Cafe

Technologies : The Website was built using HTML,CSS,JavaScript,MySQL and PHP.
features : The website likely includes features such as :
1. A Visually appealing design that reflects the theme of country cafe
2. Navigation menus to guide users through the website.
3. Information about the cafe ,its menu and location.
4. Possibly an online ordering system or reservation system.

Cosmetic Store Inventory Management

Technical Implementation :
- Java Programming Language : Utilizes Java's OOP features(Classes, Objects, Inheritance, polymorphism) for modular and maintainable code.
- Error Handling : Implements robust error handling mechanisms to previous data corruption and provide informative error messages.

Web System for FitZone Fitness Center

Technologies : The Web System was built using HTML,CSS,JavaScript,MySQL and PHP.
 Features such as : A Visually appealing design that reflects the theme of FitZone Fitness Center
 Navigation menus to guide users through the website. Information about the fitness center, its
 programs, services, and location. Possibly an online membership registration or booking system.

Web System Sellers and Buyers in one platform (Fixnow)

Technologies : The Website was built using HTML,CSS,JavaScript,MySQL and PHP.
 Features such as : FixNow – Service Request Management System
 Developed a PHP and MySQL-based web platform for managing repair and maintenance service
 requests, enabling users to submit issues, track repair progress, and communicate with
 technicians. Includes admin panel, user authentication, and real-time status updates.

Web System Pahana Edu Bookshop

Technologies : The Website was built using React,TailwindCSS,springBoot & mongo DB.
 Features such as : Developed a Java-based application to automate bookshop operations,
 including customer registration, order management, billing, and inventory tracking. Features
 secure login, customer booking records, car and driver management modules, and user-friendly
 interfaces with proper validation and error handling.

App For LUXE VISTA Resort

Technologies : The Mobile App was built using Java and SQLite**.**
Features : The app likely includes features such as : A Visually appealing design that reflects the
theme of LuxeVista Resort Navigation menus to guide users through the app. Information about the
resort, its rooms, services, and nearby attractions. Options to browse and book rooms, reserve in-
house services like spa appointments and fine dining. User authentication for secure access and
booking management.

Mobile App UI/UX Design for LuxeVista Resort

Tools Used: Figma, XML for UI/UX implementation
Description: Designed a visually appealing and user-friendly interface for LuxeVista Resort's mobile
application. The app enhances the guest experience by offering features such as user
authentication, room and service bookings (e.g., spa treatments), and account management.
